16. Court Cart Girls Basketball - \$399
17. Rebounder Basketball Training Aid - \$215
18. Gold Steppers Speaker - \$440

Total Requests - \$145,554

HUDL

Randy Richard

Description:

It provides feedback and analysis to our athletic teams and coaches, so that they are better prepared for opponents throughout the sports seasons.

This is a renewal entry, as Hudl is a service that has been requested over the years for athletics. As technology has advanced, so have the offerings and the costs from Hudl. Currently, our football, volleyball, basketball, soccer, and wrestling teams all have access to the functions and services that Hudl provides. While it is mainly a tool for our high school athletic teams, there are some functions of it that we have used for middle school. In addition to the software benefits, we currently have 3 Hudl cameras permanently mounted, at the stadium complex, the main gym, and the Phillips Gym. These cameras have an unmanned operation that follows the course of a game or a practice and allows for us to upload that stream for parents and fans to watch live events in these locations.

Cost: The cost of the service for next year should hold steady at \$16,000, plus tax (\$640).

Stadium Sound Revamp

Randy Richard

Description:

Provide quality sound for all groups that use the system during events. Athletics is the impetus for a number of performances by multiple co-curricular groups at Episcopal.

Cost:

\$50,200

Cost:

13 foot flag - \$275/flag

Asking for funding for at least 4 for a total cost of \$1,100

Sideline/Press Box Communication System

Charlie O'Brien

Description:

This new communication system would allow us to dramatically increase our ability to communicate as a coaching staff on gamedays. This new set would include 10 Headsets as opposed to our current 6. This would allow our full staff as well gameday support personnel to be able to communicate together. The new system also includes features such as: Dual Band Transceiver, Frequency Hopping, and a Conference Module. All these features will create a more reliable source of communication for us as a staff, and to relay information to our student athletes in a timely, efficient, and reliable manner.

As the football program has grown over the years, the need to communicate with players from the press box has become the standard in high school. Our current system is over 10 years old, is outdated, and makes it very difficult to communicate with players on the sideline from the Press Box. This new system includes features that easily allow us to communicate with the sideline. Which not only helps coaches give feedback to players, but the player can communicate with the coach about what he is seeing on the field.

Cost:

Porta Phone - DBx Dual Channel Full Duplex Wireless System – DBx 10 HC - \$8,500

Delivery - \$100

Total - \$8,600

Football Passing “JUGS” Machine

Charlie O'Brien

Description:

This machine can “throw” the perfect pass. It is similar to a pitching machine for footballs. It can throw a pass as far as 80 yards and can throw up to 600 passes per hour. This machine allows the receiver to catch hundreds of passes more than without the machine. This machine alone could create tens of thousands of more catching reps over the course of an entire season. This goes a long way in helping our receivers catch the ball.

This machine would go a long way in helping the football program. The Episcopal football program has grown significantly over the last few years. Our roster has grown in numbers and allows us to be more creative with the way we schedule our practices. We now have the ability to “multi-task” and run multiple drills at the same time. The inherent problem is that to work catching drills, someone has to be throwing the ball. To work returning drills, someone has to be kicking the ball. This usually involves having to use our QB just to throw the ball. This takes away time from the QBs development, as well as significantly adds to the amount of throws on the QBs arm on a daily basis. This machine will allow us to dramatically decrease the amount of throws we ask of our QBs, which will keep their arm healthy and fresh. It also can be used to assist in Special Teams, it can have the same effect on our kickers and punters as it does our Quarterbacks, limiting the number of throws or kicks each is asked to do in practice. It also can be used to long snap for working field goals or catching punts.

Cost:

\$4,300

Tackle Wheel Set

Charlie O'Brien

Description:

These Tackle Wheels will allow us to practice our tackling drills without having to tackle other teammates. The tackle wheel can create a moving target for tackling drills. This can dramatically increase the amount and intensity and reps we can get on a daily basis. It also helps teach the correct way to tackle. Its shape allows us to teach the tackling process at a much more in depth level compared to using a standard tackling dummy.

4 Different sizes of tackle wheels allow different positions to work on more position specific type tackling. It allows us to specialize in the different types of tackles needed for different scenarios.

It would also give us a size appropriate tackle wheel for the middle school program. It serves as a great tool for introducing tackling to 5th and 6th grade flag football players who have never tackled before.

Cost:

\$4,200

20 Hurdle Cart

Bill Jones

Description:

It would dramatically decrease the amount of time between events at Home Track meets. As well as allows us to focus on practice, a not setting up hurdles one by one.

Cost:

#6604-20 First Place Universal Hurdle Cart XL - \$845.00

Shipping - \$200.00
